[LS3 Aircraft Engine - aerotechllc.net](#)

The LS3 engine is constructed of aluminum alloy block and heads. One special note about the LS3 block is that it was designed considerably stronger than many of the other LS engines with thicker walls. Due to its strength, the LS3 block was later used in the LS9 for the ZR1 engine, a very high output supercharged engine.

[Aluminum VS Iron - LS Engine Weight Comparison - YouTube](#)

Any gen3 engine is lighter than a gen1 sbc with possibly the exception of the 99-00 6.0 lq4 which for some reason has iron heads. Aluminum heads and water pumps are standard on everything else regardless of block so you're dropping a ton of weight immediately without blinking. Stepping up to an aluminum block is pretty staggering.
